

How to create a **If SHIPPO Then That** Recipe

1

Make sure you have an IFTTT account:

<http://ifttt.com/join>

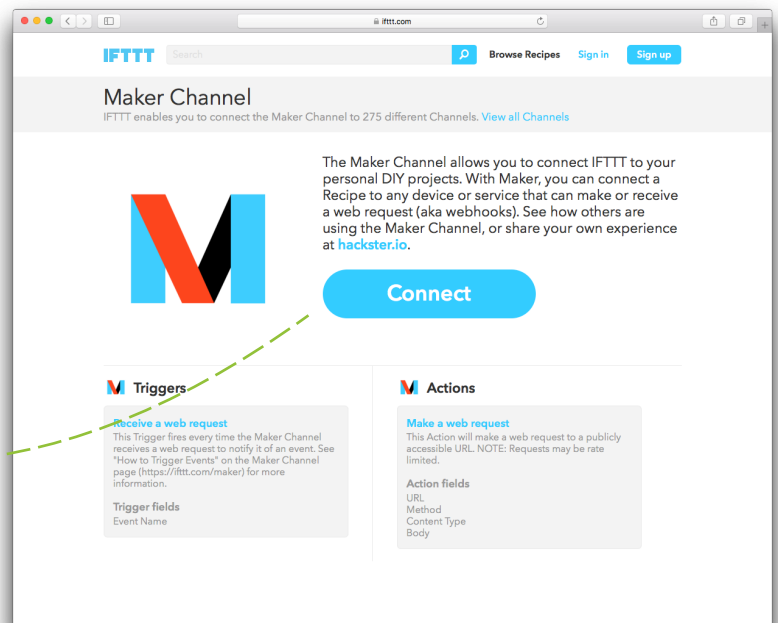

2

Connect to the Maker Channel:

<http://ifttt.com/maker>

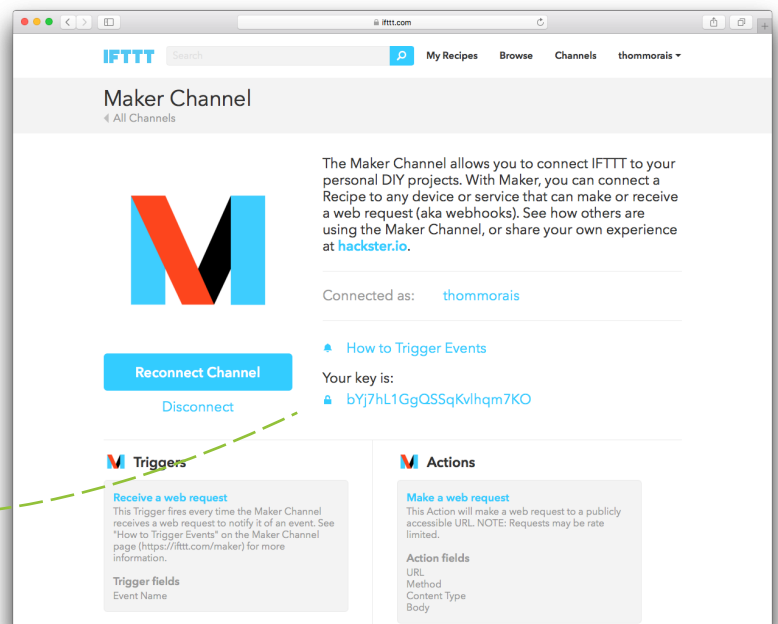

a

Connect to the Channel

b

This is your key

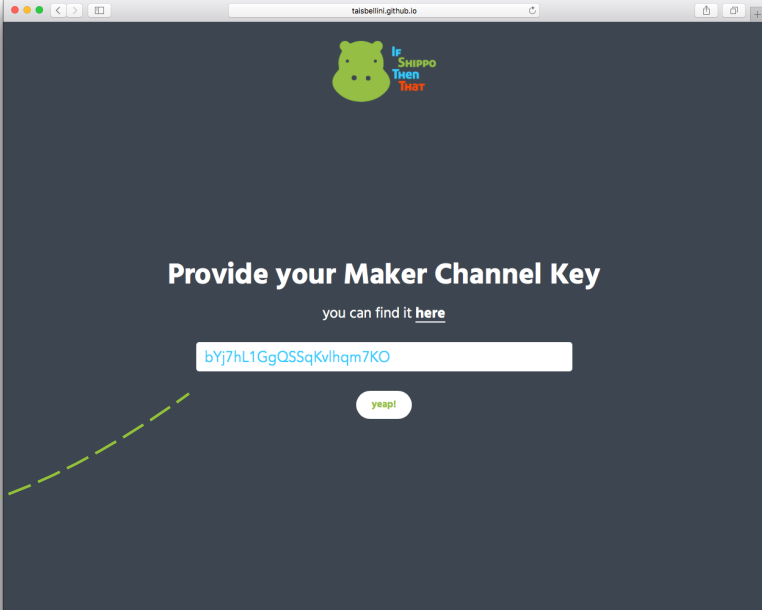

3

Go to <http://istt.vai.la>

a

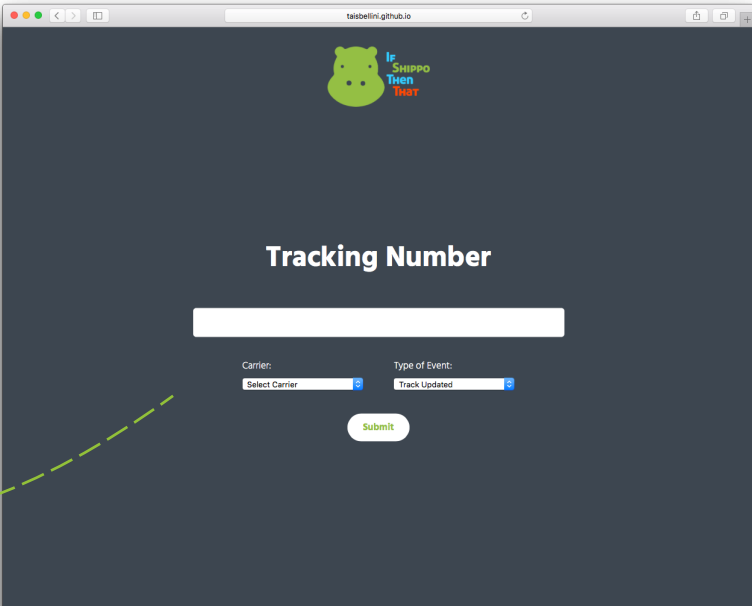

Put the KEY

A screenshot of a web browser window showing a form titled "Provide your Maker Channel Key". The form has a text input field containing the key "bYj7hL1GgQSSqKvIhqm7KO" and a "yeap!" button. Above the input field, there is a link "you can find it [here](#)". The browser's address bar shows "taisbelini.github.io". A green dashed line connects the text "Put the KEY" to the input field.

b

Put the information of the shipment you want to track by ifttt.

A screenshot of a web browser window showing a form titled "Tracking Number". The form has a large text input field for the tracking number. Below it, there are two dropdown menus: "Carrier:" with "Select Carrier" and "Type of Event:" with "Track Updated". A "Submit" button is at the bottom. The browser's address bar shows "taisbelini.github.io". A green dashed line connects the text "Put the information of the shipment you want to track by ifttt." to the tracking number input field.

4

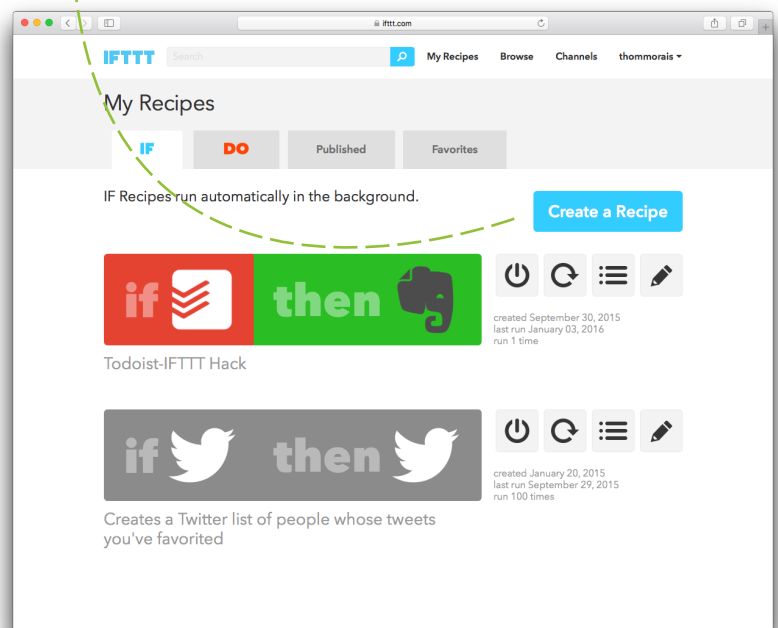

Now you can go to IFTTT and create a new Recipe using the Maker Channel as **THIS**.

a

Go to My recipes → Create recipe

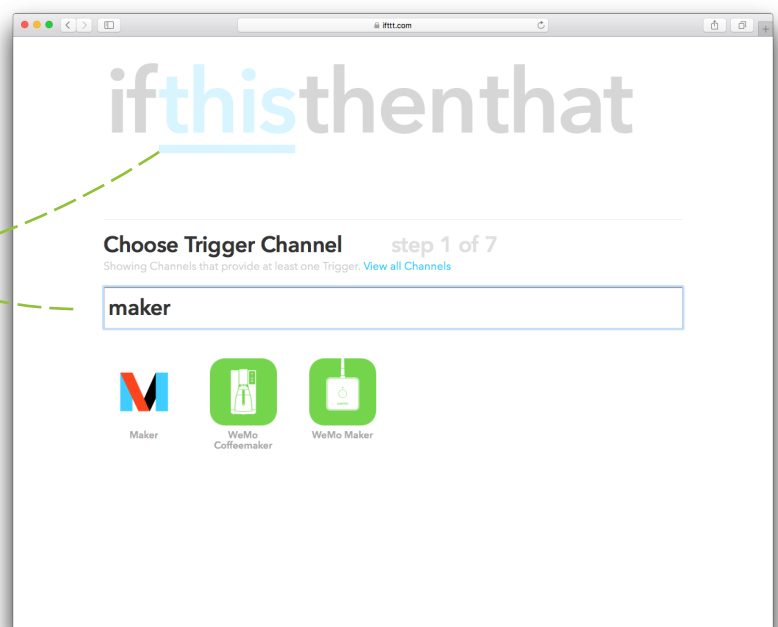

<https://ifttt.com/myrecipes/personal>

<https://ifttt.com/myrecipes/personal/new>

b

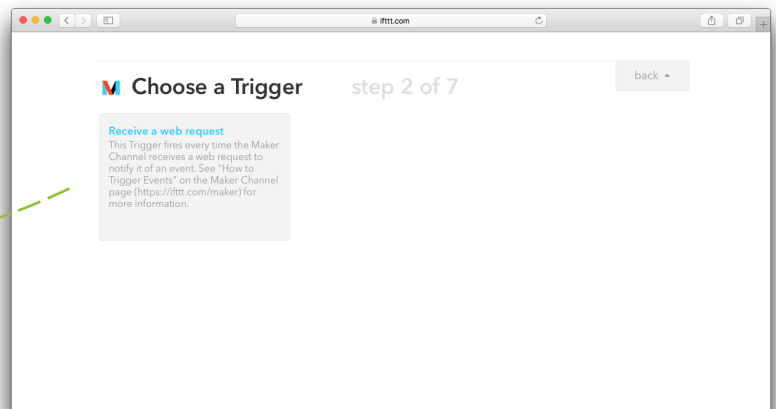

click on THIS and search for **Maker**

4

C

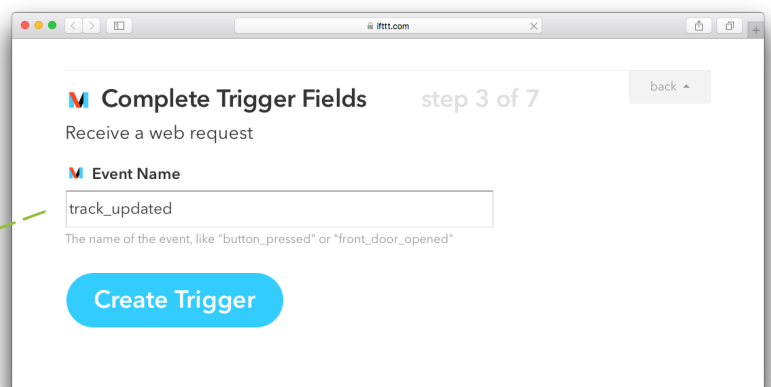

Choose the “receive web request” trigger

d

Complete the Field:

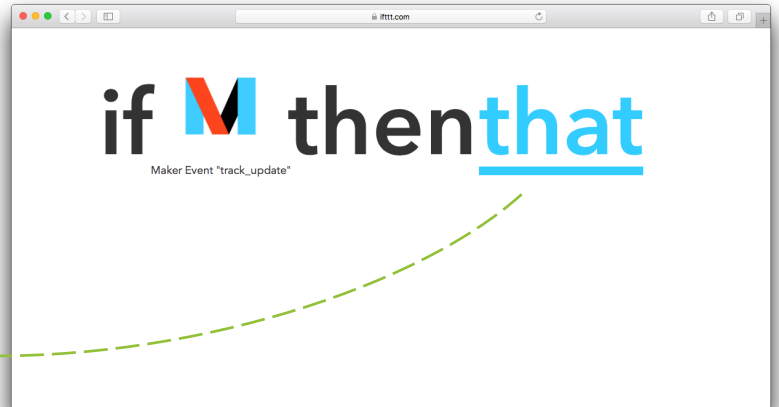

Event Name: track_updated or track_delivered. (The SAME you chose in step 3b)

4

e

Create the THAT part, using whatever channel you wish.

f

I'll use Twitter as the example and choosing the "Post a tweet" action.

4

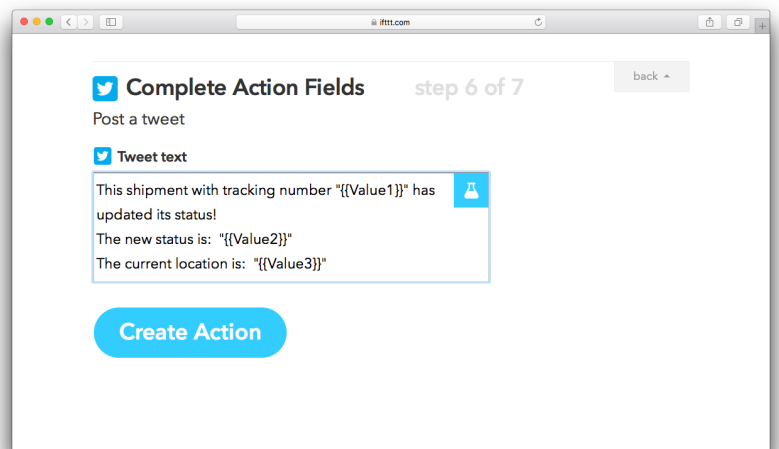

g

Create the message you wish. Our application sends the following data to IFTTT:

Value1: tracking number

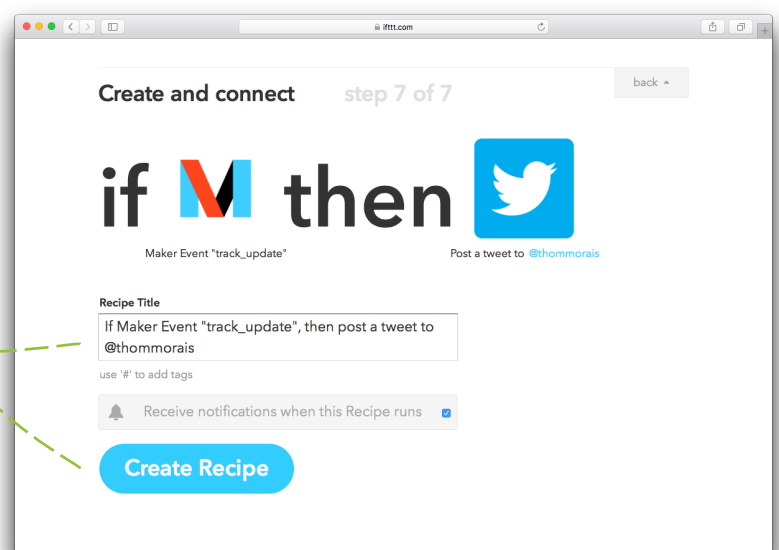

Value2: written status

Value3: current location

h

Give the recipe a title and create!

Using a PRE DEFINED RECIPE

To make things easy to the user, we made two recipes that would have more use cases:

If Shippo Then Gmail

If Shippo Then SMS

1

To start using an existing recipe:

Go to the recipe link (Gmail as example):

<https://ifttt.com/recipes/384912-if-shippo-then-gmail>

a

Put the correct Event name as mentioned in 4d.

The screenshot shows the IFTTT website interface. At the top, there's a navigation bar with the IFTTT logo, a search bar, and links for 'My Recipes', 'Browse', 'Channels', and a user profile 'thommorais'. Below the navigation bar, the page is divided into two main sections: 'if' (trigger) and 'then' (action). The 'if' section features a Shippo logo, and the 'then' section features a Gmail logo. The main heading is 'If Shippo Then Gmail'. Below this, there are 'Notes' explaining that the user needs to go to <http://istt.vai.la> to get a Maker Channel's Key and a Tracking Number. The 'Event Name' field is set to 'track_updated', with a note that it must be 'track_updated' or 'track_delivered'. The 'To address' field is set to 'thommorais@gmail.com', with a note that it accepts up to five email addresses, comma-separated. There is a checkbox for 'Receive notifications when this Recipe runs' which is checked. A large blue 'Add' button is prominently displayed. At the bottom, there are 'Advanced settings' for the recipe, showing it was created by 'taisbellini' with 10 adds and 0 favorites. Social sharing buttons for 'Tweet', 'Share', 'Email', and 'Embed' are also present.

IFTTT Search My Recipes Browse Channels thommorais

if then

If Shippo Then Gmail

Notes: Go to <http://istt.vai.la> and provide your Maker Channel's Key and the Tracking Number of the product you want to track.

Event Name (must be track_updated or track_delivered)

track_updated

The name of the event, like "button_pressed" or "front_door_opened"

To address

thommorais@gmail.com

Accepts up to five email addresses, comma-separated

Receive notifications when this Recipe runs ☒

Note that if you use this recipe you'll receive a pretty e-mail like this:

because we put an HTML in the body of the email when creating the recipe (You can do that too if you create a recipe with Email or anything that accepts an html). The html is in github.

If you have any doubts contact us at:
